-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown (6564546).

Brown discloses an assembly including a fluid coupling (6) having an impeller and a runner, a circuit oil system (14) including a diverter valve (4, 16) for sending circuit oil selectively to a cavity between the impeller and the runner or to a reservoir (3), a prime mover (not shown) for rotating the impeller, and a machine (not shown) operatively connected to be driven by the runner, means for sensing a slowing of the rate of rotation of the runner and acting in response to the slowing of the runner beyond a predetermined point to actuate the diverter valve to send the circuit oil to the reservoir. Wherein the means for sensing a slowing of the rate of rotation of the runner senses the slowing of the rotation of the runner with respect to the impeller and acts in response to the slowing of the runner beyond a predetermined point with respect to the impeller to actuate the diverter valve to send the circuit oil to the reservoir, and the means for sensing the slowing of the rate of rotation of the runner with respect to the impeller measures the slip speed as a percentage, and responds to the reaching of a pre-selected percentage to actuate the diverter valve.
